Completed Internship Program on Internet of Things using Python Programming.
(10/06/2024 to 26/06/2024)

CERTIFICATES

Oops Concepts in C++ - Great learning

Oops consept In python - great learning

PROJECTS

Temperature based automatic iot fan

An automatic IoT fan is a smart cooling device equipped with Wi-Fi connectivity and advanced automation features. It can be controlled remotely via a smartphone app or voice assistants like Alexa and Google Assistant. Integrated with sensors, it adjusts speed or operates automatically based on temperature, humidity, or motion detection. Users can set timers, schedules, and modes like natural breeze or sleep mode for personalized comfort. Designed for energy efficiency, it reduces power consumption while offering convenience. With real-time monitoring, customization options, and a sleek modern design, an IoT fan enhances both comfort and smart home integration.
